OR CLOSURE OF A MOBILE HOME PARK**

Pursuant to Arizona Revised Statutes (“A.R.S.”) § 33-1476.01 (C), if a homeowner/tenant is required to move due to a change in use resulting in closure or redevelopment of the mobile home park, the homeowner/tenant may do any of the following:

1. **Relocate the home to a new location.** Payment from the Mobile Home Relocation Fund (“Fund”) is available for the lesser of the actual moving expenses of relocating the mobile/manufactured home to a new location that is within a one hundred mile radius of the vacated mobile home park, or the maximum of \$12,500 for a single section mobile/manufactured home, or \$20,000 for a multi- section mobile/manufactured home.

**REHABILITATION OF A MOBILE HOME**

If the unit is a mobile home, built prior to June 15, 1976, the home is required to be rehabilitated prior to the relocation of the mobile home to another mobile home park. A rehabilitation permit must be purchased from the Department prior to any modification of the unit.

Pursuant to A.R.S. § 41-4008, the costs of bringing a mobile home into compliance with the requirements may be reimbursed to the homeowner from the Fund for an amount not to exceed one thousand five hundred dollars (\$1,500) if the homeowner qualifies based on income.

- B. The landlord shall notify all tenants in writing about the mobile home relocation fund established in A.R.S. § 33-1476.02.
- C. If a tenant is required to move due to a change in use or redevelopment of the mobile home park, the tenant may do any of the following:
  - 1. Collect payment from the mobile home relocation fund for the lesser of the actual moving expenses of relocating the mobile home to a new location that is within a one hundred mile radius of the vacated mobile home park or **\$12,500** for a single section mobile home or **\$20,000** for a multi-section mobile home. ## **REHABILITATION OF MOBILE HOMES**

A **mobile home** is defined as a residential structure built before June 15, 1976, on a permanent chassis, capable of being transported in one or more sections and is installed on a foundation system and connected to on-site utilities. The foundation system may or may not be a permanent foundation. Mobile homes do not include recreational vehicles, HUD manufactured homes (built on or after June 15, 1976 to the HUD code), or factory-built buildings (also known as modular homes).

Arizona Revised Statutes 41-4008 requires that mobile homes that are moved from one mobile home park in this state to another mobile home park in this state, and mobile homes entering the state be rehabilitated for the safety of the home and its occupants. Rehabilitation is required prior to moving the mobile home from the existing mobile home park, except for mobile homes moving into this state which are required to be rehabilitated once they arrive to a site in this state.

*Please verify the local zoning requirements with the city, town or county BEFORE planning to relocate a mobile home. Some local jurisdictions have requirements that exceed the state requirements; some local jurisdictions do not allow mobile homes.*

The cost of rehabilitating a mobile home may be reimburse to the owner of the mobile home if the household income of the owner of the mobile home is at or below 100% of the current federal poverty guidelines published annually by the United States Department of Health and Human Services.

## **REHABILITATION PERMIT**

The Department of Housing issues all Rehabilitation Permits. Local jurisdiction (city, towns, counties) require planning and zoning permits prior to installing a mobile home.

## **REHABILITATION OF MOBILE HOMES**

### **R4-34-606**

#### **PURPOSE**

The purpose of this program is to provide minimum safety standards for homes manufactured before the implementation of the HUD Manufactured Home Construction and Safety Standards. This applies to homes manufactured before June 15, 1976. Arizona law requires that "A person shall not occupy or otherwise use a mobile home which has been brought into this state or move a mobile home from one mobile home park in this state to another mobile home park in this state unless it meets the standards pursuant to this chapter and displays the proper state insignia" pursuant to A.R.S. § 41-4048 (C).

#### **REQUIREMENTS** (Pursuant to Arizona Administrative Code ("A.A.C") R4-34-606

A. A rehabilitation permit shall be obtained from the Office of Manufactured Housing prior to any modification of the unit. (Permit fee is \$49.00 if income is below Area Median Income (AMI); \$306.00 if income at or above AMI. This includes the permit, compliance insignia, and two inspections. Additional inspections may incur additional charges.)

B. The following requirements shall be met for a mobile home to be issued a certificate of compliance:

1. A smoke detector (which may be a single station alarm device) shall be installed on any wall in a hallway or space connecting bedroom(s) and living areas. When located in a hallway, the detector shall be between the return air intake and the living area. Each smoke detector shall be installed in accordance with its listing. The top of the detector shall be located between 4 inches to 12 inches below the ceiling;

2. The walls, ceiling, and doors of each gas fired furnace and water heater compartment shall be lined with 5/16 inch gypsum board, unless the door opens to the exterior of the unit in which case the door may be all metal construction. All exterior compartments shall seal to the interior of the unit;

3. Each room designated expressly for sleeping purposes shall have at least one outside egress window or approved exit device, unless it has an exterior door. The window or exit shall have a minimum clear dimension of 22 inches and a minimum clear opening of 5 square feet. The bottom of the exit shall not be more than 36 inches above the floor;

4. All electrical systems shall be tested for continuity to assure that metallic parts are properly bonded, tested for operation to demonstrate that all equipment is connected and in working order, and given a polarity check to determine that connections are proper. The electrical system shall be properly protected for the required amperage load. If the unit wiring is of aluminum conductors, all receptacles and switches rated 20 amperes or less directly connected to the aluminum conductors shall be marked CO/ALR. Exterior receptacles other than heat tape receptacles, shall be of the ground fault circuit interrupter (GFCI) type. Conductors of dissimilar metals (copper/aluminum, or copper clad aluminum) must be connected in accordance with NEC Section 110.14; and

5. The unit's gas piping shall be tested with the appliance valves removed from the piping system and the piping capped at those areas. The piping system shall withstand a pressure of at least 6 inch mercury or 3 psi for a period of not less than ten (10) minutes without showing any drop in pressure. Pressure shall be measured with a mercury manometer or a slope gauge calibrated so as to read in increments of not greater than 1/10th pound or equivalent device. The source of normal operating pressure shall be isolated before the pressure test is made. After the appliance connections are reinstalled, the piping system and connections shall be tested with line pressure of not less than 10 inches nor more than 14 inches water column air pressure. The appliance connections shall be tested for leakage with soapy water or bubble solution. All gas furnaces and water heaters shall be vented to the exterior in accordance with IMC Chapter 8.

C. The unit shall be inspected by the Office of Manufactured Housing to ensure compliance with the above listed requirements.

D. The office shall issue a certification of compliance for each unit in compliance with the above requirements, and affix an insignia of approval to the exterior wall nearest the point of entrance of the electrical service.

## FREQUENTLY ASKED QUESTIONS

Q. If I am moving my home from a park to private land, do I still need to have the rehab done?

A. State law only requires the rehab when a home is being brought into the state from another state or being moved from one park to another park. The State does not require that a rehab be done if you are moving from a park to private property, however, many local jurisdictions do. Check with your local jurisdiction (city, county) first.

Q. I have an electric furnace. Does the compartment still need to be lined with gyp?

A. No. Only gas fired appliance compartments are required to be lined with gypsum board (i.e.; sheetrock, drywall). This includes any door to the compartment, unless the door is to the exterior to the house, in this case the door may be made of metal. When appliances are fueled by gas, all seams and openings to the interior of the house must be sealed. This is to prevent the ingress of combustion gasses into the living area of the home and provide some measure of fire protection. Sealing can be accomplished with drywall joint compound or caulking. All exposed wood must be covered with gyp board.

Q. We are using one of the bedrooms as a den. Does this room still require an egress window?

A. Yes. Sleeping rooms (bedrooms) are as originally designated by the home's manufacturer. A sleeping room not currently being used as such may be used as such in the future.

Q. I'm not understanding the size requirement for the egress window, can you clarify?

A. Many older homes were built with rather small windows in the bedrooms. The purpose of the egress device (usually a window or door) is to allow an easy escape route from the home in event of an emergency, such as a fire. The egress opening must be accessible and big enough for a person to fit through in a hurry. The sill of the window can be no more than 36 inches above the floor and the opening part of the window must be at least 22 inches wide and be a minimum of five square feet in area. Any security bars that may be present must have a quick release mechanism that allows someone to climb out of the window.

Q. What is a GFCI receptacle and where do I need to put them?

A. A GFCI (ground fault circuit interrupter) is a device that is designed to protect people from accidental electrocution in event of a ground fault. An example would be if someone were blow drying their hair while sitting in a bathtub full of water (please don't do this) and they dropped the hair dryer in the water. The GFCI receptacle would open the circuit before the person could be electrocuted. All exterior receptacles need to be GFCI. Any receptacle within six feet of a sink or tub needs to be GFCI.

Q. What will I need to do when my home is inspected? How do I prepare?

A. The inspector will be looking to see that the items listed above in the Requirements section have been completed satisfactorily. The inspector will need to witness a successful gas test, so the test must be conducted in the inspector's presence. The inspector will also check the electrical system; this will require that the electricity be on or that a generator of sufficient capacity be available. A common cause for a failed inspection is incomplete, unsuccessful or unavailable gas or electrical tests. It would be a good idea to pre test the home to identify and resolve any problems before calling for an inspection. Another common area of failure is inadequate gyp installation, or sealing, in gas appliance compartments. Be sure the work is complete in these areas. Keep in mind that the permit fee includes two inspection visits, any additional visits may incur additional charges, so it is a good idea to make sure that the work is complete before calling for an inspection.

## EXAMPLE OF A GAS TEST

### **A. Materials needed:**

1. Sufficient caps of the correct size to cap off open ends of gas pipe.
2. Appropriate fitting with gauge (usually calibrated in oz.) and valve (usually a bicycle type valve stem) to allow pressurization of the system.
3. Method of pressurizing system (usually a bicycle tire pump).
4. Soapy water, or a commercially available bubble solution, and a method of application (brush, swab or squirt bottle).

### **B. Procedure:**

1. Shut off gas supply at yard line valve. Disconnect yard line at entrance to home and cap yard line.
2. Install gauge and valve fitting at supply entrance to home.
3. Disconnect appliances and cap off supply pipe at appliances.
4. Pressurize gas pipe system to a minimum of 3psi (or equivalent). System must hold pressure for ten minutes without dropping. If pressure drops, the leak must be located and repaired and the system re-pressurized for a minimum of ten minutes. System passes when it will hold pressure without dropping for ten minutes.
5. After main system pipes pass pressure test, uncap supply pipes at appliances and reinstall appliance connections.
6. Pressurize system and check appliance connections with soapy water solution. If bubbles indicate a leak at connection, repair leak and retest. System passes when no leaks are detected at appliance connections.
