2017 Balance of State Continuum of Care Sheltered and Unsheltered Point In Time Report

Date Issued: June, 2017

Karia Lee Basta, Special Needs Administrator

1110 West Washington Street, Suite 280 | Phoenix, AZ 85007

Telephone: (602) 771-1000 | Facsimile: (602) 771-1002 | TTY: (602) 771-1001

This page intentionally left blank.

This is a data report by county for the Point In Time conducted the last week of January 2017 for the thirteen (13) counties that comprise the Balance of State Continuum of Care.

This page intentionally left blank.

ACKNOWLEDGEMENTS

The Arizona Department of Housing, on behalf of the Arizona Balance of State Continuum of Care and the Governance Advisory Board, wishes to thank all of the individuals and organizations that contributed to the preparation, implementation, and success of the 2017 Point In Time Count and Survey. Such an undertaking would not be possible without the collaboration and efforts of local service providers, faith and community based organizations, county departments, law enforcement, and the many volunteers.

Special thanks to the local leads that organized the PIT for each county, which included training of the volunteers and being available to answer questions and assist those conducting the count during those three (3) days in January.

Special thanks to the 240 plus volunteers from all across the counties who gave of their time and talents, braving the weather, to locate, reach out, and interview our neighbors experiencing homelessness.

Special thanks to the following agencies and community organization that contributed staff time, support, resources, and office space for planning and training activities to help make this 2017 PIT a success:

Achieve Human Services
 Arizona Youth Partnership
 Bisbee Coalition for the Homeless
 CAHRA
 Catholic Charities Community Services
 CBI, Inc. and the Women's Transition Project, Inc.
 Cenpatico Integrated Care
 City of Apache Junction
 City of Flagstaff
 City of Sierra Vista
 City of Yuma
 Cochise County Public Housing Authority
 Community Partnership of Southern Arizona
 Cornerstone Mission
 Crossroads Mission
 Flagstaff Public Housing Authority
 Flagstaff Shelter Services
 Genesis Project

Good Neighbor Alliance
Health Choice Integrated Care
Horizon Health and Wellness
Housing Solutions of Northern Arizona
Mohave County Community Development
National Community Health Partners
Northern Arizona University
Northern Arizona VA Health Care System
Northland Cares
Northland Family Help Center
OCCAC
Red Cross of Southern Arizona
Southern Arizona VA Health Care System
United Way of Pinal County
US Vets
Veterans Resource Center
WACOG
West Yavapai Guidance Clinic

Special thanks to our consultant, Candee Stanton, for her expertise and guidance through the entire Point In Time Count and Survey. Her planning and coordination plus production of the final report is invaluable in our efforts to end homelessness for all Arizonans.

OVERVIEW

The Arizona Department of Housing (ADOH) is the collaborative applicant for the Balance of State Continuum of Care (BOSCO). The U.S. Housing and Urban Development Department (HUD) requires communities that provide services to persons who are experiencing homelessness and receive HUD funding for housing projects must convene a Continuum of Care. The BOSCO has many responsibilities including:

- Planning and implementing services for persons who are experiencing homelessness in thirteen (13) counties in Arizona: Apache, Cochise, Coconino, Gila, Graham, Greenlee, La Paz, Mohave, Navajo, Pinal, Santa Cruz, Yavapai, and Yuma.
- Through the Arizona Department of Housing as fiscal agent, the BOSCO receives HUD funding for permanent supportive housing, transitional housing, and rapid re-housing services for persons who are experiencing homelessness in the counties identified above.
- The Yearly Point In Time Count. As required by HUD, sometime during the last ten (10) days of January, the number of persons who are in emergency shelter, transitional housing, and permanent housing must be counted in a single point of time. This year, that count took place for the night of January 24th.

The count includes all agencies that enter data into the Homeless Management Information System (HMIS). Although HUD considers only those in emergency shelter and transitional housing as “homeless” for the purposes of the count, those in permanent housing are also counted to give an overall picture of persons housed and assisted by homeless service providers.

The Yearly Unsheltered Count. In addition to the sheltered count, HUD also requires continuums of care to count persons who are unsheltered as a part of the Point In Time count. The PIT Committee, consisting of ADOH staff, local coordinators for each county, and hundreds of volunteers in communities throughout the BOSCO, organize and complete the count each year.

The following provides a summary of information collected in 2017. A complete data report by county is also attached.

SUMMARY

856 people
in ES

190 people
in TH

722 people
unsheltered

Overview of Persons and Households Count 2013-2017

The BOSCOG has been conducting Point In Time counts since 2008. Originally, unsheltered counts were completed every other year and sheltered counts every year. In 2015, the BOSCOG made the commitment to conduct unsheltered counts every year. This decision aligned the BOSCOG with HUD's increasing use of data related to program and funding decisions. Completing the unsheltered count every year provides the BOSCOG with timely information for decision-making and improves the ability to be competitive in the HUD Notice of Funding Availability (NOFA) process.

Several items impact the count:

- The quality of the information inputted into HMIS.
- The survey and methodology for the unsheltered count.
- The number of volunteers recruited.
- The quality of the training provided for volunteers.
- The weather - especially in the northern part of the state where winter storms and below freezing temperatures make it difficult to conduct a robust count.

IMPROVEMENTS:

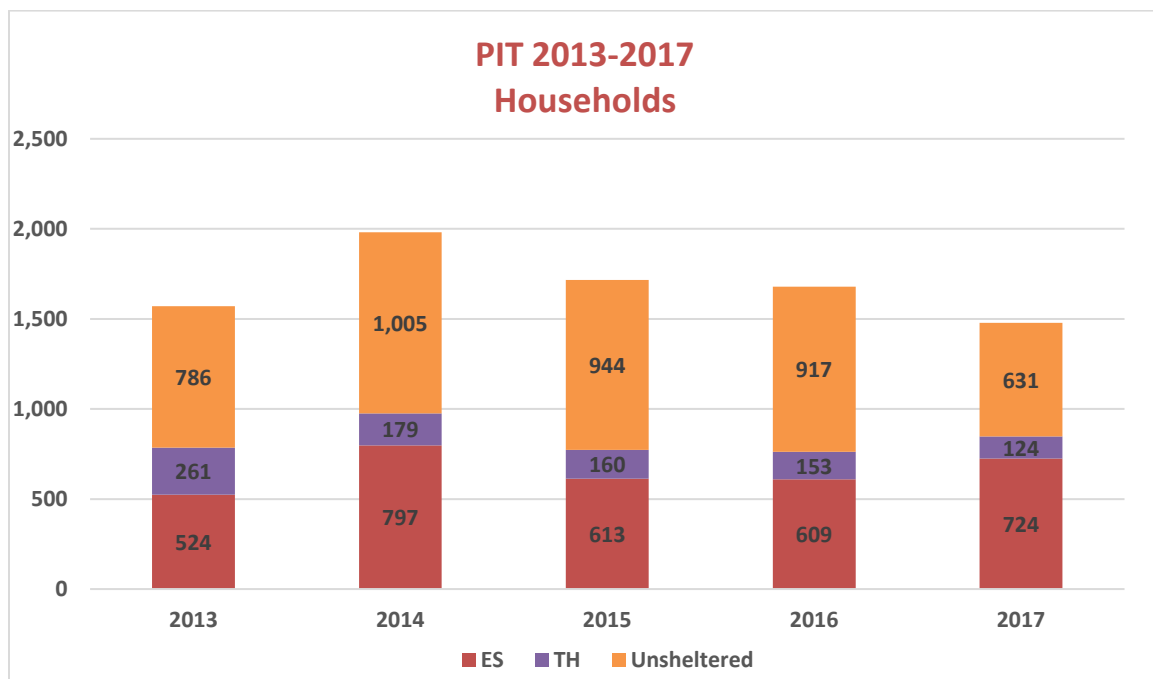

- ❖ Over the years, Local Coordinators have helped develop consistent methodologies.
- ❖ The survey tool has evolved.
- ❖ Additional training of volunteers takes place in person at the local level in addition to the state level using webinars.
- ❖ Since 2014, when HUD refined the count and added sub-populations beyond the general count we have gathered invaluable information on households that meet the definition of chronically homeless, veterans, and unaccompanied youth.

Both the shelter and unsheltered counts use two (2) primary data points - the count of households and the persons in those households. The following charts provide an overview of the persons and households counted in the BOSCOS geographic area 2013-2017.

Households

	2013	2014	2015	2016	2017
ES (Emergency Shelter)	524	797	613	609	724
TH (Transitional Housing)	261	179	160	153	124
Unsheltered	786	1,005*	944	917	631

(*Note: For 2014, the unsheltered count, conducted in the summer, is not a HUD official number but included for purposes of comparison)

Persons in those Households

	2013	2014	2015	2016	2017
ES (Emergency Shelter)	915	1,019	851	771	856
TH (Transitional Housing)	471	330	246	363	190
Unsheltered	1,049	0	1,305	1,217	722

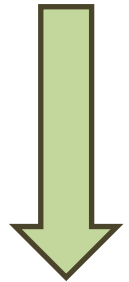

As indicated:

- The number of households and persons in an emergency shelter have decreased since 2014. The number of households in transitional housing have decreased since 2014. The number of persons, however, has fluctuated.
- There was an increase (fifteen point eight percent (15.8%)) in households in emergency shelter from 2016 to 2017. The weather contributed as January 24th was a cold winter day. Many individuals sought shelter, particularly in the northern counties.
- The number of persons (twenty-eight percent (28%)) and households (thirty-one percent (31%)) counted during the unsheltered count decreased from 2016 to 2017.

Households/Persons Who Meet the Definition of Chronically Homeless

Persons who meet the definition of chronically homeless started to be counted in 2014. The following provides a summary of this sub-population counted in the BOSCO.

	2014	2015	2016	2017
CH Sheltered persons (ES and TH only) (includes individuals and persons in families)	105	20	43	68
CH Unsheltered	No count took place in the winter	522	394	388

In 2017, there was an increase of fifty-eight percent (58%) in the number of persons sheltered (ES and TH only) considered chronically homeless. In addition, there was a slight reduction in the number of persons unsheltered. Since 2015, however, there has been a twenty-five point six percent (25.6%) reduction in the number of persons who were unsheltered and met the definition of chronically homeless.

25.6% drop
in number of
chronically
homeless
unsheltered
persons since
2015.

- Most households that meet the definition of chronically homeless are eligible for permanent supportive housing. The following chart indicates the number of beds that were dedicated to households that met the definition. This does not reflect the actual number of persons housed. HUD has continued to refine the process of categorizing beds. For 2017, the number of dedicated beds was based on the number of chronically homeless persons housed in permanent supportive housing. As a result of this methodology change in there is a significant increase in the number of dedicated beds as indicated in the chart below.
- The data indicates that this priority change has been effective in increasing the number of persons who are moving into housing and a decrease in the number of CH households who were homeless at the Point In Time count.

Veterans

HUD began requiring the count of veterans in 2014. The following provides an overview of veterans counted since 2014.

	2014	2015	2016	2017
Veterans Sheltered (ES and TH) only (does not include HH members)	138	107	112	113
Veterans Unsheltered	No count took place in the winter	409	193	125

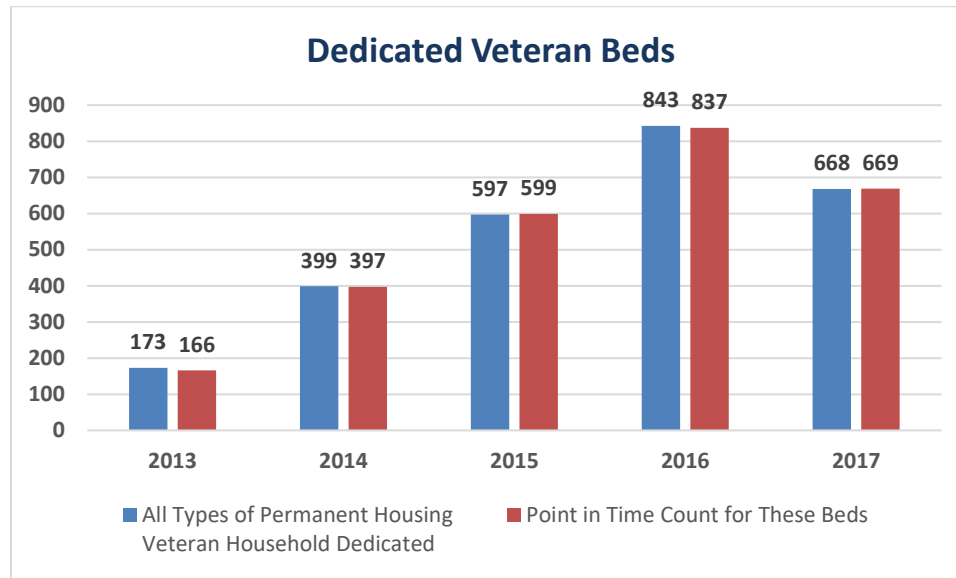

As indicated, there was a thirty-five point two percent (35.2%) reduction from 2016 to 2017 in the number of veterans that were unsheltered. This is a direct result of the increase of availability of permanent housing dedicated for veterans and their family members.

Veteran permanent housing includes PSH, SSVF/RRH, and VASH. The following chart indicates the number of permanent housing beds and the utilization for the night of the count in the particular year.

CHRONIC HOMELESS INFORMATION

Starting in 2015, beds were categorized differently which resulted in a reduction of “dedicated” beds; 2017 saw it change again resulting in an increase.

Contracts require the implementation of Housing First and the use of the VI-SPDAT, and the priority are households that are deemed chronically homeless.

As indicated:

- There has been an increasing emphasis to house veteran households. Between 2013 and 2016, the BOSCOG saw an increase in resources such as VASH (Veteran focused housing vouchers) and SSVF/RRH options for veterans. These resources combined with the BOSCOG priority of housing veteran households resulted in a fifty-two point eight percent (52.8%) decrease of unsheltered veterans in 2016. There was an additional decrease of unsheltered veterans (thirty-five point two percent (35.2%)) in 2017 as well.
- There was approximately a 400% increase in the number of beds available for veterans between 2013 and 2016. In 2017, there was a twenty percent (20%) decrease in the number of beds included in the housing inventory. This does not represent a reduction in the availability of housing options however as the count is based on a Point In Time and housing units are only included in the housing inventory if they are occupied.
- In the case of SSVF/RRH and VASH, the number of beds and the number of persons housed will always be equal. However, prior to the ramp up of veteran housing, the BOSCOG established some veteran only projects. In these cases, vacancies or over utilization can occur.

52.8% decrease of
unsheltered veterans
in 2016

35.2% decrease of
unsheltered veterans
in 2017

320% increase in
the number of beds
available for veterans
since 2013

Other Dedicated Beds

In 2017, four point nine three percent (4.93%) of all beds counted were dedicated to survivors of domestic violence and one point one percent (1.01%) were dedicated to individuals with HIV/AIDS.

Housing Inventory

The following table provides an overview of the number of projects, number of beds and how many beds were occupied at the Point In Time date from 2013-2017. This information includes all types of projects.

	2013	2014	2015	2016	2017
Number of Projects	106	116	109	108	100
Number of available beds in those projects	2,332	2,567	2,601	2,894	2,536
Number of beds occupied the night of the count	2,001	2,275	2,506	2,741	2,372
Bed utilization rate	85.8	88.6	96.3	94.7	93.5

Considerations

- The number of projects fluctuates from year to year as new projects were added or consolidated. In addition, projects that do not participate in HMIS fluctuate as well. Projects may not provide information each year (i.e. HUD required that the Veterans' Domiciliary (in Prescott) be included in prior year counts but excluded for the count in 2016 and future years).
- The number of beds available may fluctuate due to Fair Market Rents.
- Total number of beds may include beds that were added to accommodate seasonal needs (i.e. winter/summer specific beds, overflow).

Sheltered/Unsheltered Count

Sheltered Count

Persons staying in emergency shelters, including domestic violence shelters, living in transitional housing or permanent supportive housing programs were included. Persons and beds available are counted regardless of funding source. Data is extracted from HMIS for the sheltered count conducted January 24, 2017 for those agencies that input in the system. If agencies do not participate in HMIS, a survey is sent to them for completion.

Unsheltered Count

Persons were interviewed in twelve (12) of the thirteen (13) counties of the continuum. Zero (0) unsheltered persons were located in Greenlee County. In addition to the PIT unsheltered survey tool, volunteers were asked to administer the appropriate SPDAT. For the 2017 count, 244 VI-SPDATs, fourteen (14) F-SPDATs, and four (4) TAY SPDATS were collected for a total of 262. This was a 106% increase over the 100 VI-SPDATs completed in 2016.

The highlights of the count are as follows:

Project Type	# of beds occupied	% by type of total (2,372) beds occupied	Total # of available beds counted	% of total (2,536) beds counted	Utilization Rate by Project Type
ES (Emergency Shelter)	856	36.09%	1,019	40.18%	84%
PSH (Permanent Supportive Housing)	1,179	49.70%	1,179	46.49%	100%
RRH (Rapid Re-housing)	147	6.20%	147	5.8%	100%
TH (Transitional Housing)	190	8.01%	191	7.53%	100%
TOTAL	2,372	100%	2,536	100%	

- Across project type, utilization rates were high. Emergency Shelter had the lowest at eighty-four percent (84%). Because emergency shelter is opportunistic, it is difficult to plan for utilization.
- With the addition of RRH units dedicated to veterans, this type of housing has increased in the BOSCO. Best practices show it to be an important part of the continuum.
- All types of permanent housing are being utilized effectively throughout the continuum.

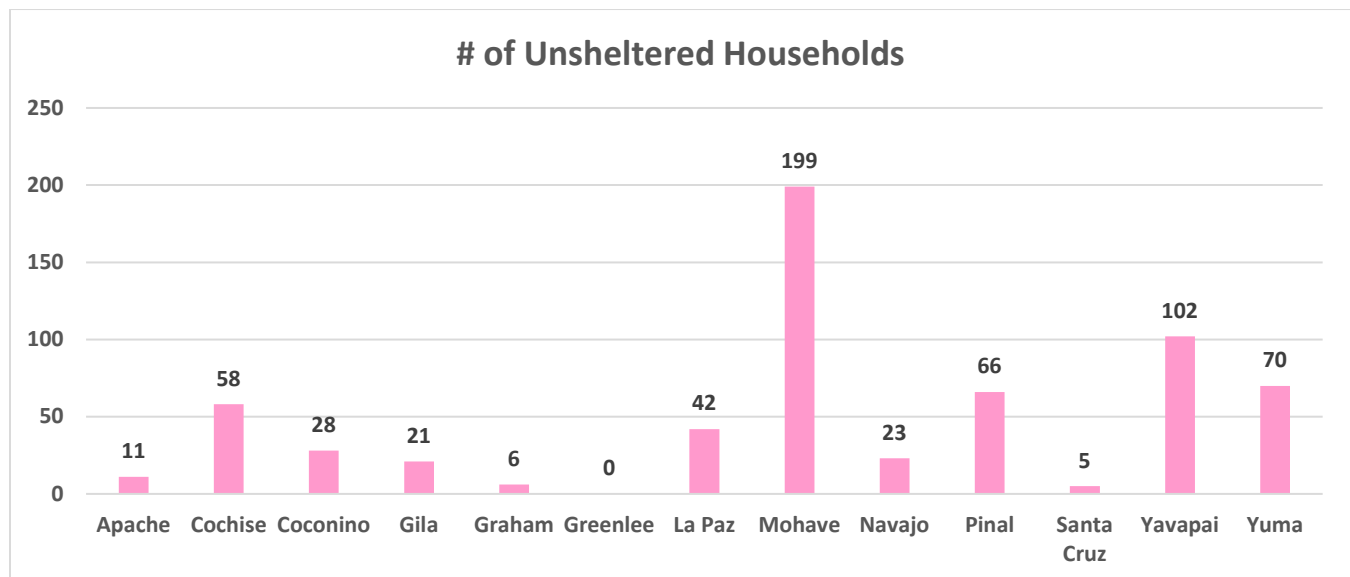

Methodology

Only persons who slept in a place not meant for human habitation, such as a car, on the street, in a riverbed, in the forest, or some similar location were counted. Persons who came to locations such as feeding programs were asked if they would participate in a brief survey, which provided the data for the count. Volunteers and agency staff also outreached to locations where individuals gather including encampments in the desert, forests, or mountains. Persons who participated were offered a small token of thanks such as socks and/or hygiene items for participating.

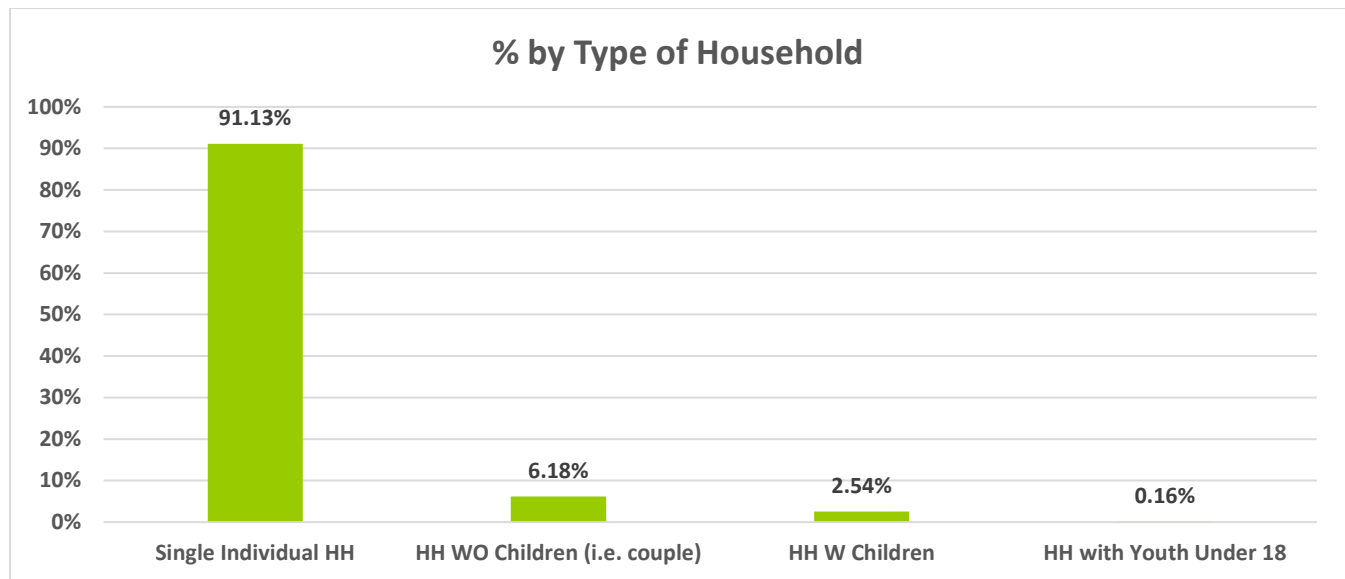

- A total of 631 surveys were included in the final unsheltered count.
- 301 surveys were collected from individuals who were sheltered the night of the count.

Basic information about those individuals is included in the data reports. Surveys that were not used in the final unsheltered count included individuals who reported they had spent the previous night in a shelter, in a friend's home, or in a motel room, among others. Surveys that did not provide sufficient information were also not included.

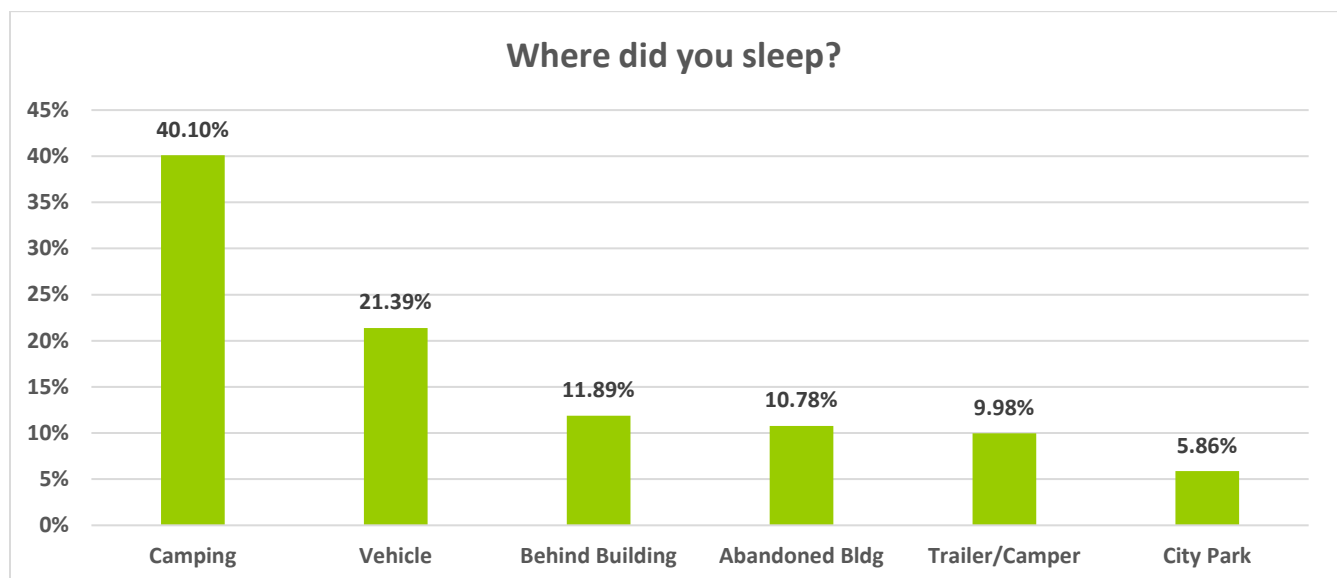

The following provides an overview of the surveys collected by county:

The 631 households included in the survey had a total of 722 individuals in those households. This is a **reduction of forty point six percent (40.6%)** from 2016. The majority of persons were single person households. The following provides an overview by type of household (“unaccompanied children” is defined as children who present as a household):

Persons slept in a variety of locations on the night before they participated in the count. The majority of persons camped in the forest, mountains or desert, stayed in a vehicle, or were on the streets. The following provides a summary of where individuals indicated they spent the night before the count:

- Eighty-eight point five percent (88.5%) of all persons included in the survey were over twenty-four (24); six point nine three percent (6.93%) were between eighteen (18) and twenty-four (24), and four point five seven percent (4.57%) were under eighteen (18). Nearly half (forty-eight point eight nine percent (48.89%)) of all persons were between the ages of forty-five (45) and sixty-four (64).
- The majority of individuals were male (seventy-three point eight two percent (73.82%)), with females accounting for twenty-five point nine percent (25.9%). Less than one percent (1%) of individuals counted identified as transgender.
- Thirteen point seven one percent (13.71%) of all individuals in households were Hispanic.
- The majority of persons in households identified as White (sixty-nine point eight one percent (69.81%)), followed by those who identified as multiple race (sixteen point two percent (16.2%)), Native Americans (eight point seven three percent (8.73%)), African American (three point zero five percent (3.05%)). A small percentage of individuals identified as Asian (point one four percent (.14%)) and Hawaiian (two point eight percent (2.08%)).
- The majority of persons (fifty-eight point six four percent (58.64%)) have experienced homelessness for twelve (12) or more months. The next highest category was those persons who have experienced homelessness between six (6) and twelve (12) months (twelve point zero four percent (12.04%)).
- Nineteen point six five percent (19.65%) of all adults (interviewees and household members) counted indicated they had served in the armed forces.
- Twenty-four point five six percent (24.56%) of persons indicated they are survivors of domestic violence.
- Forty-six point five nine percent (46.59%) of persons reported that they are using health care services.
- Individuals reported multiple conditions with substance use (twenty-three point seven five percent (23.75%)) being the most frequently reported followed by a serious mental health issue (sixteen point six nine percent (16.69%)). (Individuals were able to report multiple conditions.)

- Sixteen point zero one percent (16.01%) of individuals interviewed reported they were employed on a part-time or full- time basis.
- Economic conditions were contributing factors to individuals becoming homeless including the loss of employment and unable to pay rent or mortgage. The table below illustrates conditions that individuals indicated contributed to their becoming homeless. (Individuals were able to report multiple conditions.)

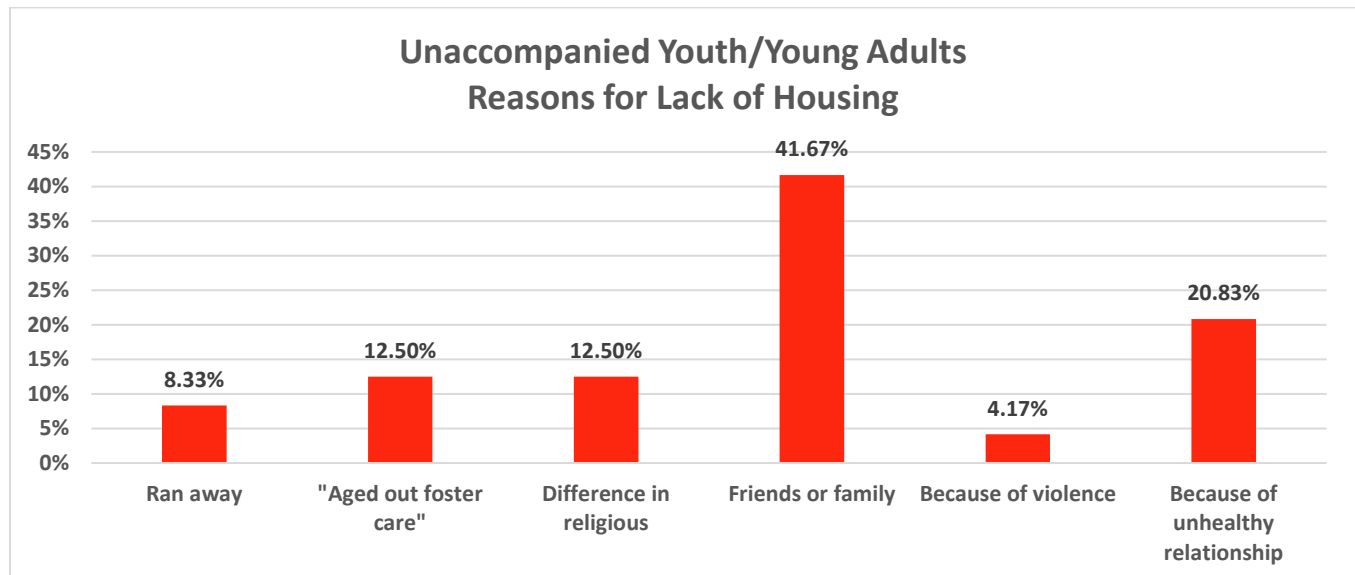

Youth/Young Adults under 25

For the 2017 Point In Time count, efforts were focused on identifying youth under twenty-five (25) who were homeless.

- Only one (1) person under eighteen (18), living on their own, was counted.
- There were forty-six (46) unaccompanied young adults (eighteen (18) to twenty-four (24)) counted. No parenting youth in this age range were counted.

Additional questions were asked of this population to provide information about their reasons for homelessness. Most youth reported issues with friends or family members (forty-one point six seven percent (41.67%)) and unhealthy relationships (twenty point eight three percent (20.83%)) as primary reasons. In addition, some youth reported aging out of foster care (twelve point five percent (12.5%)).

Key Considerations

- Local communities need to review emergency shelter (including domestic violence shelters) utilization. Although high at eighty-four percent (84%), (approximately the same occupancy as 2016), it would appear that there continues to be some opportunity for increasing efficient utilization.
- The use of Coordinated Entry and the Housing First philosophy are contributing to households in the BOSCO finding appropriate housing.
- Prioritizing those who are experiencing chronic homelessness and those who are veterans is having a positive effect in reducing the number of persons who are homeless.

- The BOSCOC experienced a significant reduction in the number of persons experiencing homelessness. Although a positive trend, severe weather conditions did prohibit the ability to conduct the count as thoroughly in all geographic areas.

For further information about the Balance of State Continuum of Care, please contact David Bridge, Continuum of Care Coordinator, Arizona Department of Housing, at David.Bridge@azhousing.gov.

For further information about this data report, please contact Candee Stanton, Independent Contractor (who supports the BOSCOC), at candee.stanton@gmail.com.

Adults with HIV/AIDS	0	0	0	2	2
Victims of Domestic Violence	265	37	0	155	457

Methodology for AZ-500 - Arizona Balance of State CoC

Sheltered Population Total

1. What data source(s) was used to produce the total number of people included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? Please indicate the percentage of the PIT count derived from each of the sources. (If a source was not used, please enter zero).

HMIS Data	77%
Provider-level surveys	23%
Client-level surveys	0%
Observation	0%
Other	0%
Total	100%

2. Was the CoC able to collect information about the number of people being sheltered on the night of the count from all emergency shelters, Safe Havens, and transitional housing projects listed on the HIC or only some? listed on your HIC or only some?

- Complete census count

3. What information or method(s) was used to de-duplicate the count of the total number of people included in the sheltered population?

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Blitz count of persons in shelters (i.e., count occurred at same time to avoid double counting)

Sheltered Subpopulation

4. What data source(s) was used to produce the demographic and subpopulation data included in the sheltered population (staying in an emergency shelter, Safe Haven, or transitional housing) on the night of the count? (select all that were used)

- HMIS Data
- Provider-level surveys

5. Was the CoC able to collect information about the demographic and subpopulation characteristics of all sheltered people or only some?

- All sheltered people

6. Looking at the change in your sheltered count from last year's count, please choose up to three reasons that best explains these changes from the drop down list below.

- Change in transitional housing capacity
- Impact of coordinated entry
- Weather

Please provide a brief description of these specific factors (500 word limit):

The ES sheltered number increased 11% while the TH sheltered number decreased 25%. TH decreased simply because there is less TH. Five programs totaling 87 beds were lost to the COC while only one was gained for 6 beds. In addition, with the bitterly cold weather in the northern part of the state, there was a great effort expended to find and shelter those people that were out in the weather to prevent freezing to death so overflow increased by 64 beds in the north although there was an overflow bed decrease in the southwestern corner of the state. Coordinated Entry also worked well in that information for HMIS was garnered in sheltering those that in less cold times would be difficult to outreach. Less TH and cold weather account seem to account for the increase in ES.

Unsheltered Population

7. What approach(es) was used to count the total number of people included in the unsheltered population during the PIT count. (select all that were used)

- "Night of the count" - known locations

7a. Were certain areas within the CoC geography specifically excluded because the CoC had reason to believe there were no unsheltered people in those areas?

Yes

7b. How did the CoC select the areas that were included for canvassing?

- Other: There are deserts and mountains in the CoC that cannot be accessed

7b1. Did the CoC adjust the information in some way (e.g., statistical adjustment or extrapolation) to account for areas within the CoC geography that were not canvassed but where unsheltered people might have been on the night of the PIT count?

No

7c. In areas that were canvassed, did the CoC count all unsheltered people in those areas or a sample of people?

- All people encountered during the count

8. What information or method(s) was used to de-duplicate the total count of people in the unsheltered population? (Check all that apply)

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number

- Blitz count of unsheltered people (i.e., canvassing of different areas occurred at same time to avoid double counting)

Unsheltered Subpopulations

9. What approach(es) was used to collect demographic and subpopulation data about unsheltered people included in the unsheltered population during the PIT count?

- Surveys/interviews of people identified as unsheltered on the night of the PIT count
- Surveys/interviews of people identified as unsheltered on the night of the count, but completed at a later date

10. Were all people who were encountered during canvassing on the night of the count or during post night of the count PIT activities asked to complete a survey/interview?

- All people encountered were surveyed

11. What information or method(s) was used to produce an unduplicated total count of homeless people across your sheltered and unsheltered populations?

- Comparison of personally identifying information (PII), such as name, date of birth, and Social Security Number
- Blitz count of unsheltered people (i.e., sheltered and unsheltered counts occurred at same time to avoid double counting)

12. Looking at the change in your unsheltered count from last year's count, please choose up to three reasons that best explains these changes from the drop down list below

- Change in rapid re-housing capacity
- Impact of coordinated entry
- Weather

Please provide a brief description of these specific factors (500 word limit):

A new state funded (1 million) RRH commenced in September 2016. Our veterans number decreased as the SSVF programs continue to work with our veterans and assisting them to find homes. Coordinated Entry continues to take root and though better utilized in some counties than others, is still having an impact in providing appropriate services to those who are unsheltered. The weather during count week was bitter cold in the northern part of the state and there was a great effort expended to find and shelter those people so as to not freeze to death.
